International motor efficiency standards

Since the validation of IEC/EN 60034-30:2008 and its refined version IEC/EN 60034-30-1: 2014 , a worldwide energy efficiency classification system has existed for low voltage three-phase asynchronous motors. This system increases the level of harmonization in efficiency regulations around the world and also covers motors for explosive atmospheres. IEC/EN 60034-30-1: 2014 defines International Efficiency (IE) classes for single speed, three-phase, 50 and 60 Hz induction motors. The standard is part of an effort to unify motor testing procedures as well as efficiency and product labeling requirements to enable motor purchasers worldwide to easily recognize premium efficiency products. The efficiency levels defined in IEC/EN 60034-30-1 are based on test methods specified in IEC/EN 60034-2-1 which has been updated to edition 2.0, 2014-06.

To promote transparency in the market, IEC 60034-30 states that both the efficiency class and efficiency value must be shown on the motor rating plate and in product documentation. The documentation must clearly indicate the efficiency testing method used as the different methods can produce differing results.

Minimum energy performance standards

While the IEC sets guidelines for motor testing and efficiency classes, the organization does not regulate efficiency. The biggest drivers for mandatory Minimum Energy Performance Standard (MEPS) levels for electric motors are global climate change, government targets to cut the CO₂ emissions and rising electricity demand, especially in developing countries. The whole value chain, from manufacturer up to end user, must be aware of the legislation in order to meet local requirements and additionally save energy and reduce carbon footprint.

Harmonized standards and the increasing adoption of MEPS around the world are good news. However, it is important to remember that harmonization is an ongoing process. Even though MEPS are already in effect in several regions, they are evolving and they differ in terms of scope and requirements. At the same time, new countries are planning to adopt their own MEPS. To get the latest information please visit www.abb.com/motors&generators/energyefficiency.

IEC/EN 60034-30-1: 2014

IEC/EN 60034-30-1:2014 defines four International Efficiency (IE) classes for single speed electric motors that are rated according to IEC 60034-1 or IEC 60079-0 (explosive atmospheres) and designed for operation on sinusoidal voltage.

- IE4 = Super premium efficiency
- IE3 = Premium efficiency, identical to 'NEMA Premium' in the USA for 60 Hz
- IE2 = High efficiency, identical to EPAct in the USA for 60 Hz
- IE1 = Standard efficiency

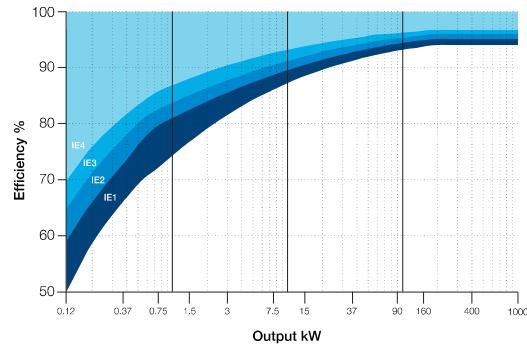

Efficiency levels defined in IEC/EN 60034-30-1 are based on test methods specified in IEC 60034-2-1.

IEC/EN 60034-30-1 covers power range 120 W to 1000 kW. All technical constructions of electric motors are covered as long as they are rated for direct on-line operation. The coverage of the standard includes:

- Single speed electric motors (single and three-phase), 50 and 60 Hz
- 2, 4, 6 and 8 poles
- Rated output P_N from 0.12 kW to 1000 kW
- Rated voltage U_N above 50 V up to 1 kV
- Motors, capable of continuous operation at their rated power with a temperature rise within the specified insulation temperature class
- Motors, marked with any ambient temperature within the range of -20 °C to +60 °C
- Motors, marked with an altitude up to 4000 m above sea level

The following motors are excluded from IEC/EN 60034-30-1:

- Single-speed motors with 10 or more poles or multi-speed motors
- Motors completely integrated into a machine (for example, pump, fan or compressor) that cannot be tested separately from machine
- Brake motors, when the brake can not be dismantled or separately fed

IE Classes - 4-pole motors

ABB and efficiency standards

ABB determines efficiency values according to IEC 60034-2-1 using the low uncertainty method (i.e. indirect method), with additional load losses determined by measurement.

As the world market leader, ABB offers the largest range of LV motors available. It has long advocated the need for efficiency in motors, and high efficiency products have formed the core of its portfolio for many years. The core of ABB's Process performance range is based on full range in IE2 and IE3 motors - with many available from stock. We also supply IE4 motors for additional energy savings.

**Minimum efficiency values defined in IEC/EN 60034-30-1:
2014 (reference values at 50 Hz, based on test methods
specified in IEC 60034-2-1 which has been updated to
edition 2.0, 2014-06).**

EU MEPS – Efficiency requirements for low voltage motors in Europe

Mandatory MEPS requirements

EU MEPS (European Minimum Energy Performance Standard) sets mandatory minimum efficiency levels for electric motors introduced into the European market. It is based on European Commission Regulation EC 640/2009 and an amendment passed in 2014, Regulation EU 4/2014.

MEPS scope

The MEPS scheme covers 2-, 4- and 6-pole single speed, three-phase induction motors in a power range 0.75 to 375 kW, rated up to 1000 V on the basis of continuous duty operation. The scheme is being implemented in three stages:

- Stage 1: 16 June 2011: Motors must meet the IE2 efficiency level
- Stage 2: 1 January 2015: Motors with a rated output of 7.5 - 375 kW must meet EITHER the IE3 efficiency level if driven direct-on-line OR the IE2 level if fitted with a variable speed drive
- Stage 3: 1 January 2017: Motors with a rated output of 0.75 - 375 kW must meet EITHER the IE3 efficiency level if driven direct-on-line OR the IE2 level if fitted with a variable speed drive

The amendment (Regulation EU 4/2014) did not change the scope of EU MEPS but it did change the details concerning which motors are excluded.

Efficiency testing methods

Motor losses and efficiency values in the EU MEPS scheme must be determined using the methods specified in standard IEC 60034-2-1:2014. International efficiency classes (IE4, IE3, IE2 and IE1) are defined in standard IEC 60034-30-1.

Compulsory efficiency levels

The table of minimum efficiency values on the previous page shows values according to IEC 60034-30-1:2014. Please note that this standard covers a wider range of motors than EU MEPS, which is still based on the previous standard (IEC 60034-30). Specifically, EU MEPS does not apply to 8-pole motors, or to motors rated below 0.75 or above 375 kW. IE1 motors have been excluded from the European market since EU MEPS came into force on 16 June 2011. Regulation EC 640/2009 required the following information on the motor rating plate and in motor documentation:

- Lowest nominal efficiency at 100%, 75% and 50% rated load
- Efficiency level (IE2, IE3 or IE4)
- Year of manufacture

These requirements were relaxed by amendment EU 4/2014 for small motors where the rating plate is too small to accommodate the full set of figures. In such cases manufacturers are now allowed to show only the efficiency for 100% rated load.

ABB and EU MEPS

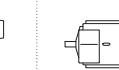

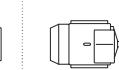

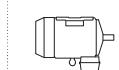

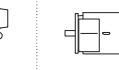

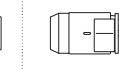

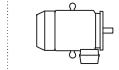

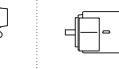

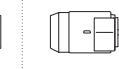

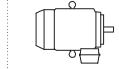

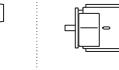

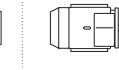

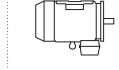

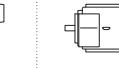

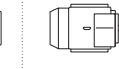

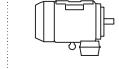

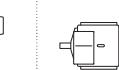

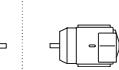

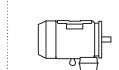

At ABB we have long spoken out in favor of efforts to boost energy efficiency and reduce emissions. We play an active role in organizations that set efficiency standards, and we are happy to see MEPS being adopted in more and more countries around the world. We hope the authorities will maintain the momentum and take MEPS forward. IEC standards move fast, and active work is needed to bring the scope of EU MEPS into line with IEC/EN 60034-30-1. EU MEPS has an important role to play in helping European industry to maintain and grow its competitiveness.

Markings and documentation

From January 1st 2015 the stage 2 requirements for EU MEPS allow IE2 motors to be used only when they are fed by a VSD. These motors (7.5-375kW) must be marked so that the compulsory need to be used with a drive becomes evident. ABB uses the following stickers for the marking.

Mounting arrangements

Foot-mounted motor						Product code pos. 12

*) Not stated in IEC 60034-7.

Note: If the motor is mounted shaft upwards, take measures to prevent water or any other liquid from running down the shaft into the motor.

General information

Cooling

Designation system concerning methods of cooling refers to standard IEC 60034-6.

Explanation of the product code

International Cooling	Circuit arrangement	Primary coolant	Method of movement of primary coolant	Secondary coolant	Method of movement of secondary coolant
IC	4	(A)	1	(A)	6
	1	2	3	4	5

Position 1

0:	Free circulation (open circuit)
4:	Free circulation (open circuit)

Position 2

A:	For air (omitted for simplified designation)
----	--

Position 3

0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component

Position 4

A:	For air (omitted for simplified designation)
W:	For water

Position 5

0:	Free convection
1:	Self-circulation
6:	Machine-mounted independent component
8:	Relative displacement

General information

Degrees of protection: IP code/IK code

Classification of degrees of protection provided by enclosures of rotating machines refers to:

- Standard IEC 60034-5 or EN 60529 for IP code
- Standard EN 50102 for IK code

IP protection

Protection of persons against getting in contact with (or approaching) live parts and against contact with moving parts inside the enclosure. Also protection of the machine against ingress of solid foreign objects. Protection of machines against the harmful effects due to the ingress of water.

Explanation of the IP code

Ingress protection	Degree of protection to persons and to parts of the motors inside the enclosure	Degree of protection provided by the enclosure with respect to harmful effects due to ingress of water
IP	5	5
	1	2

Position 1

- 2: Motors protected against solid objects greater than 12 mm
- 4: Motors protected against solid objects greater than 1 mm
- 5: Dust-protected motors
- 6: Dust-tight motors

Position 2

- 3: Motors protected against spraying water
- 4: Motors protected against splashing water
- 5: Motors protected against water jets
- 6: Motors protected against heavy seas

IK code

Classification of degrees of protection provided by enclosure for motors against external mechanical impacts.

Explanation of the IK code

International mechanical protection	Characteristic group
IK	08 1

Position 1

Relation between IK code and impact energy:

IK code	Impact energy/Joule
0:	Not protected according to EN 50102
01:	0.15
02:	0.2
03:	0.35
04:	0.5
05:	0.7
06:	1
07:	2
08:	5 (ABB Standard)
09:	10
10:	20

General information

Insulation

ABB uses class F insulation, which, with temperature rise B, is the most common requirement among industry today.

The use of class F insulation with class B temperature rise gives ABB products a 25 °C safety margin. This can be used to increase the loading for limited periods, to operate at higher ambient temperatures or altitudes, or with greater voltage and frequency tolerances. It can also be used to extend insulation. For instance, a 10 K temperature reduction will extend the insulation life.

Thermal class 130 (B)

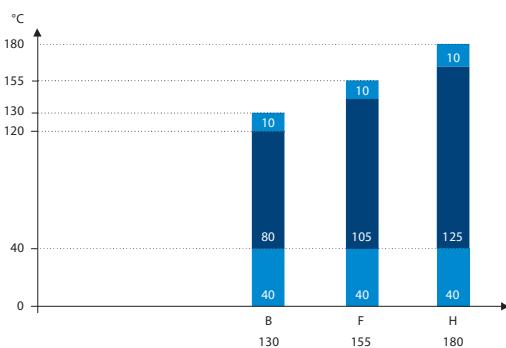

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 80 K
- Hot spot temperature margin 10 K

Thermal class 155 (F)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 105 K
- Hot spot temperature margin 10 K

Thermal class 180 (H)

- Nominal ambient temperature 40 °C
- Max permissible temperature rise 125 K
- Hot spot temperature margin 10 K

Safety margins per thermal class

General information

Voltage and frequency

The impact on temperature rise caused by voltage and frequency fluctuation is defined in IEC 60034-1. The standard divides the combinations into two zones, A and B. Zone A is the combination of voltage deviation of +/- 5 % and frequency deviation of +/- 2 %. Zone B is the combination of voltage deviation of +/- 10 % and frequency deviation of +/- 5 %. This is illustrated in figure below.

Motors are capable of supplying the rated torque in both zones A and B, but the temperature rise will be higher than at rated voltage and frequency. Motors can be run in zone B only for a short period of time.

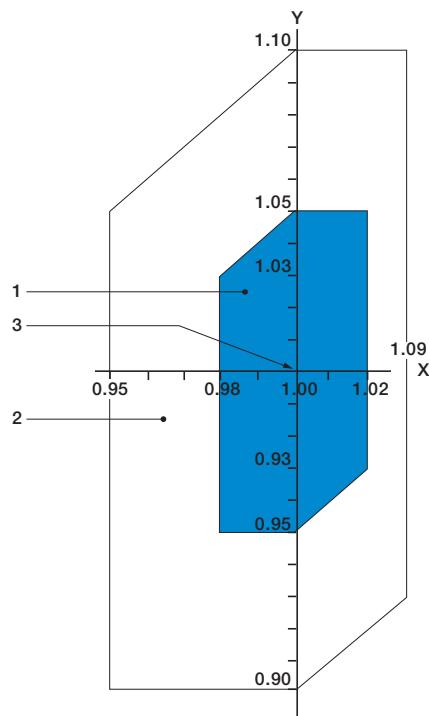

Figure Voltage and frequency deviation in zones A and B.

Position 14

A, B, C...= Generation code followed by variant codes

Efficiency values are given according to IEC 60034-2-1; 2014

For detailed dimension drawings please see our web-pages
[‘www.abb.com/motors&generators’](http://www.abb.com/motors&generators) or contact ABB.

Positions 8 to 10

Running number

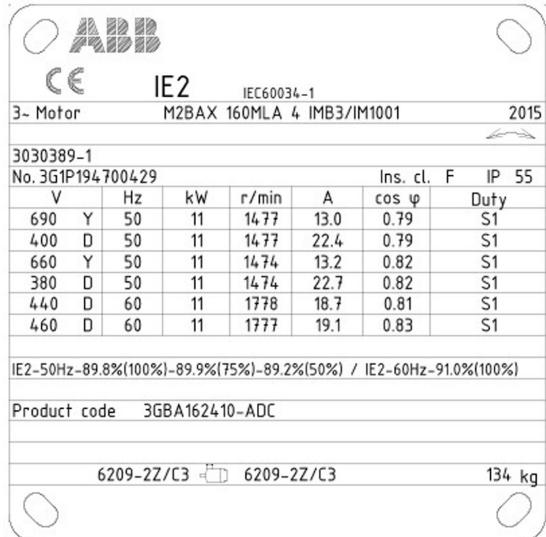

Position 11

-(dash)

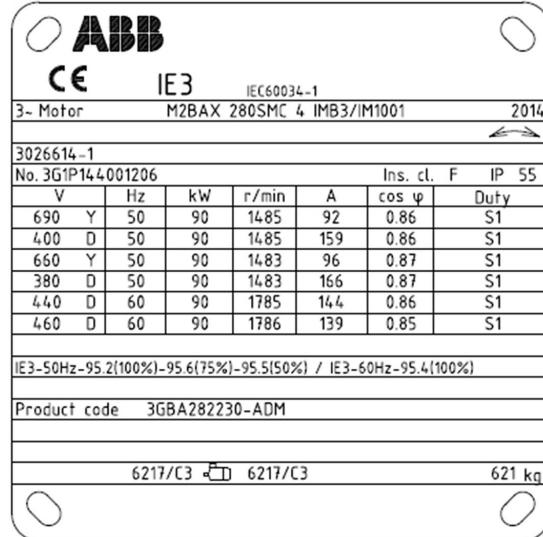

Rating plates

The motor's main rating plate shows the motor's performance values with various connections at nominal speed. The rating plate also shows the efficiency level (IE2, IE3), year of manufacture, and the lowest nominal efficiency at 100, 75, and 50 % nominal load.

The lubrication plate specifies regreasing amount, regreasing interval in hours - depending on the mounting position and ambient temperature - and types of lubricant recommended.

Rating plate for IE2 General performance cast iron M2BAX motor

Rating plate for IE3 General performance cast iron M2BAX motor

Technical data

IE3 General performance cast iron motors, 3000 r/min

IP 55 - IC 411 - Insulation class F, temperature rise class B

IE3 efficiency class according to IEC 60034-30-1; 2014

Variant codes

IE3 and IE2 General performance cast iron motors

Variant codes specify additional options and features to the standard motor. The desired features are listed as three-digit variant codes in the motor order. Note also that there are variants that cannot be used together.

Mechanical design

Bearings

General performance motors are normally fitted with single-row deep-groove ball bearings, as shown in the table below.

If the bearing at the D-end is replaced with a roller bearing (NU- or NJ-), higher radial forces can be handled. Roller bearings are suitable for belt-drive applications and can be ordered with variant code 037.

Standard and alternative designs

Axially-locked bearings

All motors are equipped as standard with an axially locked bearing at the D-end.

Mechanical design

Radial forces

Permissible loading on the shaft

The following table shows permissible radial forces on the shaft in Newtons, assuming zero axial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20 000 and 40 000 hours per motor size.

These calculated values further assume mounting position IM B3 (foot-mounted), with force directed sideways. In some cases, the strength of the shaft affects permissible forces.

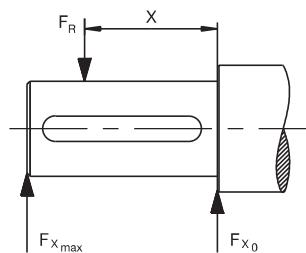

Permissible loads of simultaneous radial and axial forces can be supplied on request.

If the radial force is applied between points X0 and Xmax, the permissible force F_R can be calculated with the following formula:

$$F_R = F_{x_0} - \frac{X}{E} (F_{x_0} - F_{x_{\max}})$$

Where:

E: length of the shaft extension in the standard version

Permissible radial forces, M2BAX motor sizes 71-355, IE3 and IE2

Mechanical design

Axial forces

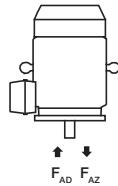

The following tables present permissible axial forces on the shaft in Newtons, assuming zero radial force, a 25 °C ambient temperature, and normal conditions. The values are given for a calculated bearing life of 20,000 and 40,000 hours per motor size.

At 60 Hz, the values must be reduced by 10 percent, and for two-speed motors, the higher speed determines permissible axial force. Permissible loads of simultaneous radial and axial forces can be supplied on request.

For axial force F_{AD} , it is assumed that the D-bearing is locked with a locking ring.

Terminal box

Standard terminal box

Terminal boxes

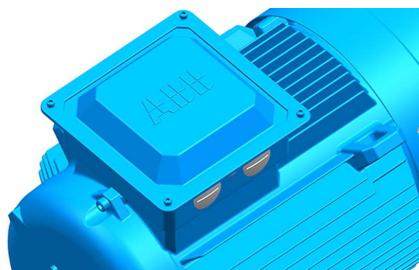

The pictures below show standard terminal boxes.

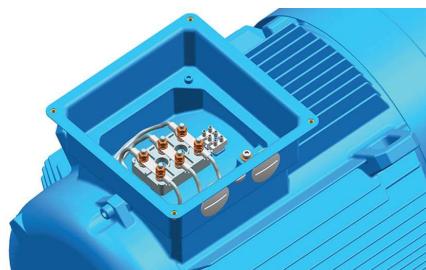

Terminal box for Motor sizes 71 to 132.

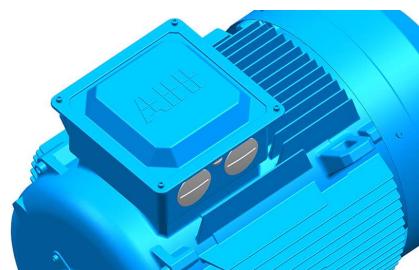

Terminal board for Motor sizes 71 to 132.

Terminal box for Motor sizes 160 to 180.

Terminal board for Motor size 160 to 180.

Terminal box for motor size 200 to 250.

Terminal board for motor size 200 to 250.

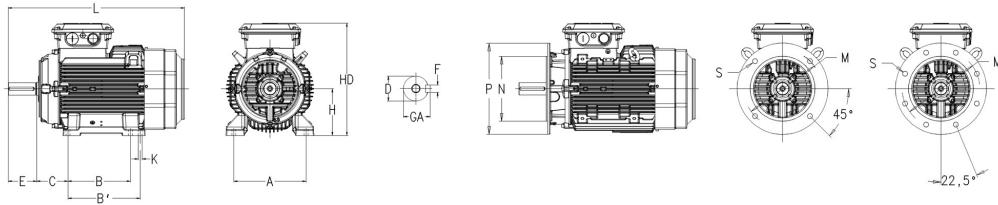

Terminal box for motors size 280 to 355.

Terminal board for motor size 280 to 355.

Motors in brief

IE3/IE2 General performance cast iron motors, sizes 71 - 112

Motor size	M2BAX	71	80	90	100	112
Stator and end shields	Material	Cast iron				
	Paint color shade	Munsell blue 8B 4.5/3.25				
	Corrosion class	C3 medium				
Feet	Material	Integrated cast iron				
Bearings	D-end	6203-2Z/C3	6204-2Z/C3	6205-2Z/C3	6206-2Z/C3	6206-2Z/C3
	N-end	6202-2Z/C3	6203-2Z/C3	6204-2Z/C3	6205-2Z/C3	6205-2Z/C3
Axially locked bearings		Locked at D-end with retaining ring				
Bearing seals	D-end	V-ring				
	N-end	V-ring				
Lubrication		Permanently lubricated shielded bearings				
Measuring nipples for condition monitoring of the bearings		Not Included				
Rating plate	Material	Stainless steel				
	Material	Steel				
Terminal box	Corrosion class	C3 medium				
	Cover screws	Zinc-electroplated steel				
	Threaded openings	2xM16, 1xM16	2xM25, 1xM16		2xM32, 1xM16	
Connections	Max Cu-area mm	4	6		10	
	Terminals	6 terminals for connection with cable lugs (not included)				
	Cable glands	Glands as option				
Fan	Material	Glass-fiber reinforced polypropylene				
	Material	Steel				
Fan cover	Paint color shade	Munsell blue 8B 4.5/3.25				
	Corrosion class	C3 medium				
	Material	Copper				
Stator winding	Insulation	Insulation class F. Temperature rise class B unless otherwise stated.				
	Winding protection	3 PTC thermistors, 150°C				
Rotor winding	Material	Pressure die-cast aluminum				
		Half key balancing as standard				
Balancing method		Open key way				
Key ways						
Drain holes		Drain holes with closable plastic plugs, open on delivery				
Enclosure		IP 55 Higher protection on request				
Cooling method		IC 411				
Lifting lugs		Integrated cast iron lifting lugs				

Motors in brief

IE3/IE2 General performance cast iron motors, sizes 132 - 250

Motor size	M2BAX	132	160	180	200	225	250
Stator and end shields	Material	Cast iron					
	Paint color shade	Munsell blue 8B 4.5/3.25					
	Corrosion class	C3 (medium)					
Feet	Material	Integrated cast iron feet					
Bearings	D-end	6208-2Z/C3	6209-2Z/C3	6210-2Z/C3	6212/C3	6213-2Z/C3	6215-2Z/C3
	N-end	6208-2Z/C3	6209-2Z/C3	6209-2Z/C3	6209-2Z/C3	6210-2Z/C3	6212-2Z/C3
Axially locked bearings		Locked at D-end with retaining ring		Locked at D-end with inner bearing cover			
Bearing seals	D-end	V-ring					
	N-end	V-ring					
Lubrication		Permanently lubricated shielded bearings					
Measuring nipples for condition monitoring of the bearings		Not Included					
Rating plate	Material	Stainless steel					
Terminal box	Material	Steel					
	Corrosion class	C3 (medium)					
	Cover screws	Zinc-electroplated steel					
Connections	Threaded openings	2xM32	2xM40, 1xM16		2xM63, 1xM16		
	Terminals	6 terminals for connection with cable lugs (not included)					
	Cable glands	Glands as option	Cable flange included, glands as option				
Fan	Material	Glass-fiber reinforced polypropylene					
Fan cover	Material	Steel					
	Paint color shade	Munsell blue 8B 4.5/3.25					
	Corrosion class	C3 (medium)					
Stator winding	Material	Copper					
	Insulation	Insulation class F. Temperature rise class B unless otherwise stated.					
	Winding protection	3 PTC thermistors, 150 °C					
Rotor winding	Material	Pressure die-cast aluminum					
Balancing method		Half-key balancing as standard					
Key ways		Open key way					
Drain holes		Drain holes with closable plastic plugs, open on delivery					
Enclosure		IP 55 Higher protection on request					
Cooling method		IC 411					
Lifting lugs		Integrated cast iron lifting lug					

Motors in brief

IE3/IE2 General performance cast iron motors, sizes 280 - 355

Motor size	M2BAX	280	315	355
Stator and end shields	Material	Cast iron		
	Paint color shade	Munsell blue 8B 4.5/3.25		
	Corrosion class	C3 medium		
Feet		Integrated cast iron		
Bearings	D-end 2-pole	6217/C3	6217/C3	6219/C3
	D-end 4-6-pole	6217/C3	6219/C3	6222/C3
	N-end 2-pole	6217/C3	6217/C3	6219/C3
	N-end 4-6-pole	6217/C3	6217/C3	6219/C3
Axially locked bearings		Locked at D-end with inner bearing cover		
Bearing seals	D-end	V-ring		
	N-end	V-ring		
Lubrication		Regreasable bearings, regreasing nipples M6x1		
Measuring nipples for condition monitoring of the bearings		Not included		
Rating plate	Material	Stainless steel		
	Material frame	Cast iron		
	Cover	Cast iron terminal box cover		
	Corrosion class	C3 medium		
Connections	Screws	Zinc-electroplated steel		
	Threaded openings	2xM63, 2 x M20	2xM63, 2 x M20	2xM75, 2 x M20
	Terminals	6 terminals for connection with cable lugs (not included)		
Fan	Cable glands	Cable glands as option		
	Material	Glass-fiber reinforced polypropylene / 2-pole metal.		
	Material	Steel fan cover		
Fan cover	Paint color shade	Black / Munsell blue 8B 4.5/3.25		
	Corrosion class	C3 medium		
Stator winding	Material	Copper		
	Insulation	Insulation class F. Temperature rise class B unless otherwise stated.		
	Winding protection	3 PTC thermistors, 150 °C		
Rotor winding	Material	Pressure diecast aluminum		
	Balancing method	Half key balancing as standard		
Keyway		Open key way		
	Heating elements	60 W	2x60 W	2x60 W
Enclosure	On request	IP 55 Higher protection on request		
	Cooling method	IC 411		
Drain holes		Drain holes with closable plastic plugs, open on delivery		
	Lifting lugs	Bolted lifting lugs
